**Cyllynt Announces New Technology in the Fight Against Software Piracy**  
*Cyllynt Ranger Can Detect Tampering and Piracy in  
Legacy Software Products*

**LOS ANGELES — September 30, 2020 —** [Cyllynt](#) introduces today **Cyllynt**

**Ranger**, a powerful new piracy detection application that enables independent software vendors (ISVs) to identify and track the illegal usage of older, non-instrumented releases of their software applications.

By detecting the presence of illegal cracked software installations, this unique product also helps protect end users from the potential threats posed by malware and ransomware that come bundled with cracked software installations.

Cyllynt Ranger can monitor and report on the use of multiple software releases, in particular, legacy releases not instrumented with phone-home technology. Automated Ranger version updates are deployed from the gateway server to the protected machines. Piracy detection signatures can be continuously updated and deployed as new cracks are identified.

As a provider of software-as-a-service (SaaS)-based anti-piracy, license compliance and software monetization technology, Cyllynt helps companies identify who is using counterfeit or unlicensed software. “Software vendors must be vigilant to stay a step ahead of pirates, who are ever more resourceful and sophisticated at hiding their identities and evading anti-piracy technologies,” remarks its CEO Ted Miracco. “Several key customers are already deploying Ranger in their extensive license compliance programs as part of a multi-layered protection strategy to overcome even the most sophisticated software hacks and ensure an uninterrupted flow of data.”

Cyllynt Ranger is the latest technology in the Cyllynt suite of anti-piracy, usage analytics and license compliance tools. Employed by the world’s leading software companies to protect their intellectual property, the software can be deployed in multiple scenarios to enhance piracy detection and provide detailed data driven intelligence to detect, identify and engage with unlicensed application users.

Cyllynt Ranger is a key new addition to Cyllynt’s software monetization and anti-piracy solutions. It is easy to integrate and deploy into existing license compliance programs. It can be deployed in conjunction with the existing Cyllynt Sentry software development kit in Cyllynt SmartFlow [Enterprise](#) and [Professional](#), which delivers usage data from within individual applications through phone-home technology, to provide an additional layer of security.

Together, Cyllynt Ranger and Sentry integrate with Cyllynt’s business intelligence analytics to enable customers to better understand the data collected and to make informed decisions about the best ways to recover revenue lost to piracy and generate additional sales opportunities.

## **Cylynt 2020 Software Monetization and Anti-Piracy Summit**

Ranger will make its debut at the [Cylynt 2020 Software Monetization and Anti-Piracy Summit in October](#). It will be overviewed at the Cylynt User Group Meeting October 27 and in a panel discussion October 28.

### **Availability and Pricing**

Cylynt Ranger is available now. Pricing is available upon request; Cylynt has a solution for every budget.
